Doğadan ilham almak, insanlığın varoluşundan beri süregelen bir yaklaşımdır. Doğal sistemler, milyonlarca yıl süren evrimsel sürecin sonucunda en verimli ve sürdürülebilir formlarına ulaşmış ve bu da insanlar için önemli bir ilham kaynağı haline gelmiştir. Biyomimikri, yani doğadan öğrenme ve taklit etme anlayışı, tasarım süreçlerinde giderek daha fazla benimsenmektedir. Biyomimikri kavramı, ilk olarak 1960'lı yıllarda biyoloji ve teknoloji arasındaki bağlantıyı vurgulayan bilim insanları tarafından ortaya atılmıştır. Doğadan ilham alarak geliştirilen tasarımlar, yalnızca estetik bir anlayışla değil, aynı zamanda fonksiyonellik ve verimlilik bakımından da önemli avantajlar sunar. Örneğin, termit yuvalarından esinlenerek geliştirilen pasif soğutma sistemleri, enerji tasarrufu sağlayan yapılar oluşturulmasını mümkün kalmaktadır. Benzer şekilde, lotus yaprağının suyu itici yüzey yapısından esinlenen malzemeler, kendi kendini temizleyebilen bina kaplamalarının üretimini sağlamıştır.

Scholarly Framework: Theoretical Perspectives on Costume Design

Scholarly literature on Powell and Atwood provides the theoretical framework for analyzing their work. Key texts such as Collins (2004) and French (2011) examine how costume design shapes character identity, social roles, and emotional depth in cinematic storytelling. Powell's work is discussed in terms of its historical accuracy and visual impact in *The Aviator* (2004) and *The Favourite* (2018), with a particular focus on how her costumes amplify the themes of public power versus personal vulnerability. Atwood's costumes in *Memoirs of a Geisha* (2005) and *Alice in Wonderland* (2010) are analyzed for their symbolic use of color and texture, which convey emotional and psychological states while also reflecting themes of transformation and personal struggle. According to Shurr (2018), Atwood's costumes often emphasize the tension between societal norms and personal identity, a theme that resonates throughout her films, from the fantastical *Alice* to the dramatic *Memoirs of a Geisha*.

Giriş / Introduction

- Yenilenebilir enerji ve güneş enerjisinin önemi gün geçtikçe artmaktadır ve çatı tipi FV(Fotovoltaik) sistemler kentlerde oldukça yaygınlaşmaktadır. Bu çalışmada karar ağacı yöntemi ile kısa vadeli güç tahmini yapılmıştır.
- The importance of renewable energy and solar energy is increasing day by day, and rooftop PV(Photovoltaik) systems are becoming widespread in cities. In this study, short-term power forecasting was carried out using the decision tree method.

Conclusion

To conclude, institutional aspects—especially cognitive and regulatory factors—play a vital role in promoting innovative entrepreneurship in developing countries. Supportive aspects still need further development to become effective. For future research, we suggest expanding the dataset, including recent years, and exploring the impact of digital transformation on entrepreneurship.

ÖZET

Otonom araç teknolojileri, gelişmiş elektronik devre sistemleri sayesinde hızla ilerlemekte ve güvenli, verimli ulaşım çözümleri sunmaktadır. Bu çalışmada, otonom araçlarda kullanılan elektronik devre tasarımları ve örnek uygulamalar ele alınmıştır. Mikrodenetleyiciler, motor sürücüler ve güç yönetimi gibi temel bileşenler detaylandırılarak, bu sistemlerin otonom sürüş üzerindeki etkileri tartışılmaktadır. Çalışmada, özellikle LIDAR, ultrasonik ve kızılötesi sensörlerin entegrasyonu ile çevresel algılama mekanizmaları incelenmiş, verilerin işlenmesi ve karar alma süreçlerindeki rolü vurgulanmıştır. Bunun yanı sıra, motor sürücü devreleri ve batarya yönetim sistemleri üzerinden enerji verimliliği ve performans optimizasyonu konuları ele alınmıştır. Örnek bir otonom mobil robot üzerinde gerçekleştirilen uygulama ile elektronik devrelerin tasarımı, devre şemaları ve sistem entegrasyonu adım adım açıklanmıştır. Sonuç olarak, otonom araçların başarısı büyük ölçüde elektronik devrelerin hassasiyetine ve güvenilirliğine bağlıdır. Bu çalışmada sunulan tasarım prensipleri ve uygulama örnekleri, otonom sistemlerin geliştirilmesine katkı sağlamayı amaçlamaktadır.

ELECTRONIC CIRCUIT DESIGN AND CASE STUDIES IN AUTONOMOUS VEHICLES

ABSTRACT

Autonomous vehicle technologies are advancing rapidly due to the development of sophisticated electronic circuit systems, providing safe and efficient transportation solutions. This study examines electronic circuit designs and case studies used in autonomous vehicles. Fundamental components such as sensor fusion, microcontrollers, motor drivers, and power management are detailed, and their impact on autonomous driving is discussed.

The study specifically analyzes environmental perception mechanisms by integrating LIDAR, ultrasonic, and infrared sensors, emphasizing their role in data processing and decision-making. Additionally, energy efficiency and performance optimization are explored through motor driver circuits and battery management systems. A case study involving an autonomous mobile robot demonstrates the design, circuit schematics, and system integration processes step by step. In conclusion, the success of autonomous vehicles largely depends on the precision and reliability of electronic circuits. The design principles and application examples presented in this study aim to contribute to the development of autonomous systems.
